Deletion	Full capacity as per the Indian Market Demand

Deletion/Rename	Justification
Deletion	<p>In most of the cases of Flexible Video Endoscope itself is not of 4K resolution and may be processor and monitor are 4K. In such cases, the processor only upscales the Full HD signal to 4K output, which does not improve the actual image details. This is primarily a marketing approach and does not provide true 4K clinical resolution. 4K systems require higher bandwidth infrastructure Greater storage capacity More powerful processing hardware Costlier replacement parts 3D systems require: Special glasses (often consumable or fragile) Calibration and technical support. As Indian Manufacturer committed to "Atmanirbhar Bharat" we strongly believe that Public procurement must be driven by the principles of economy & efficiency, rather than simply focusing on advanced or excessive technical specifications, which are coming in tenders and making the Public Procurement more and more expensive.</p>

Rename	<p>Gamma Camera with accessories is an old nomenclature. Traditionally, a Gamma Camera can perform only 2D planar imaging, whereas contemporary SPECT systems provide 3D functional information – Both systems use radiotracers. Gamma cameras detect radiation from one or two angles. SPECT cameras rotate around the patient to collect data from multiple angles. A SPECT CT system combines a gamma camera (or SPECT) for functional, radiotracer-based imaging with a CT scanner for anatomical localization.</p>
